Letter of Recommendation for Gábor Pintér

I am pleased to write a letter of recommendation for Gábor Pintér, born on August 31st, 1965. In his position as a Hardware design engineer, Gábor was employed at Robart from October 2014 to March 2017. After he went back to work from his home office in 2017, he continued to support the design and maintenance of our products.

Robart develops artificial intelligence and navigation for mobile robots and is the leading system provider for autonomous consumer robots. The Robart navigation system is a compact unit of sensors, electronics and intelligent software that manufacturers integrate into their robotic devices.

Gábor's was an important contributor to the Hardware team and designed a large part of the main board of our cleaning robot, the Hardware and Firmware of the battery management unit and one version of the safety circuit. Furthermore, he experimented with various sensors. Gábor always tried to use small microcontrollers to replace traditionally designed discrete circuits, and was very fond of ultra-cheap Chinese components.

Gábor is a mindful developer and always eager for pushing himself with a high willingness to learn new technologies. Regarding interpersonal aspects, he is a responsible and highly motivated person and integrated very well in our international team.

Therefore, we strongly recommend Gábor without any hesitation and wish him all the best for his future challenges.

Please do not hesitate to contact me for further information.

Best Regards,

Dr. Harold Artés
(CEO, Founder)
